

**SECURITY MAGNETICALLY CONTACT DETECTOR IO 102-16/1****Description**

IO 102-16/1 security magnetically contact detector is designed for locking doorways and windows, arranging "trapping" medium as well as locking other elements of buildings with an alarm signal raised to a control panel, concentrator or central surveillance system by opening reed switch contacts.

Detector consists of a reed sensor and driving element (magnet) in plastic housing. It is designed for continuous operation.

Installation:

Ø3x20mm screws are applied to the wooden surface. Installation onto the metal surface is performed with the help of wooden, cloth laminate layer, etc. with thickness of 25-30 mm. It is glued onto the glass surface. Sensor leads are connected to the line by twisting and soldering with insulation followed.

Dimensions

Dimensions in mm

**Specifications**

Switching voltage range, V	0,01-75
Switching current range, mA	5-250
Life at 0,25A - 30V, min	5·10 ⁵
Output electrical resistance	
• at closed contacts (at (100±10)mA), Ohm, max	0,5
• at open contacts, kOhms, min	200
If sensor and magnet are located parallel contacts should be:	
• closed - at the distance between them, mm	≤8
• open - at the distance between them, mm	≥45
Allowable offset of sensor and magnet, mm, max	3
Breakdown voltage between sensor leads and case, V _{AC} / V _{DC} , min	500 / 700
Operating temperature range, °C	-30 ... +50
High humidity at +25 °C, %, max	80
Vibration proof at 10 to 35 Hz, m·sec ⁻² (g), max	4,9 (0,5)
Life time, years, min	8
Sensor/magnet weight, g, max	2,5/2,3
